

Units

category	description	called	symbol	natural	coherent	base	derived	core	geometrical	remarks	
base units that are natural units	plane angle	rad is called 'radian'	rad	○	○	○			○		
		rad ² is called 'steradian'	rad ²	○	○		○		○		
	logarithm of Napier's constant	'naper'	naper	○	○	○					
	reciprocal Avogadro constant (N_A^{-1})	<i>substance name</i> (ex. Carbon dioxide) or 'natural mole'	<i>substance symbol</i> (ex. CO ₂) mol	○	○	○				The SI noted "when the mole is used, the elementary entities must be specified and may be atoms, molecules, ions, electrons, other particles, or specified groups of such particles." In this context 's' is equivalent to '3-' and 'mol' is called 'natural mol.'	
base units that are not natural units	natural unit of impedance	'ohm'	Ω or Z_F	○	○	○					
	harmonic meter	'harmon'	h	○	○	○		○	○	If a unit is omitted after square or cube, the unit shall be deemed to as harmon(ex. 'square' expresses 'square harmon'(q, 'q' comes from Latin 'quadrata), and 'cube' expresses 'cubic harmon'(c, 'c' comes from Latin 'cubus'). A square sub harmon(=10 ⁻⁴ h ²) is symbolized as h ² and a sub square (=10 ⁻⁴ h ²) is symbolized as q. A cubic sub harmon(=10 ⁻⁴ h ³) is symbolized as h ³ and a sub cube (=10 ⁻⁴ h ³) is symbolized as c. 1c=0.97424 cc.	
	harmonic second	'me'	h² or q h³ or c	○	○		○	○	○		
	harmonic Joule	'harmonic Joule'	J	○	○	○				The overline is added when the unit is used for equivalent dose. (ex. effective Joule/lookoh[<u>J</u>])	
	harmonic Kelvin (=10 ⁻²⁶ H)	'harmonic Kelvin'	K	○	○	○					
derived units of dynamical quantities	harmonic gram	'lookoh'	l	○	○		○	○			
	harmonic Watt	'harmonic Watt'	W	○	○		○			The overline is added when the unit is used for luminous flux. (ex. effective Watt[<u>W</u>])	
	harmonic Newton	'harmonic Newton'	N	○	○		○				
	harmonic Pascal	'harmonic Pascal'	P	○	○		○			The overline is added when the unit is used for phone pressure. (ex. effective Pascal[<u>P</u>])	
derived units of electromagnetic quantities	universal Coulomb	'universal Coulomb'	C	○	○		○			The prefix 'harmonic(±)' should be called 'universal' if the universal unit is equal to the harmonic unit.	
	harmonic Ampere	'harmonic Ampere'	A	○	○		○			If the context tells you it is a Harmonic System unit, you do not need to pronounce '±'. The unit of voltage is "Ω, A," but if you first read "Ω" as "nohm," you will know that the next unit is not an SI unit but a harmonic system unit so that you can read it as "nohm Ampere" instead of "nohm harmonic Ampere." Similarly, the unit of magnetomotive force, "Ω, A," can be read as "turn Ampere" instead of "turn harmonic Ampere."	
	harmonic Ørsted	'harmonic Ørsted'	E	○	○		○			If the context tells you it is a Harmonic System unit, you do not need to pronounce "±". The unit of magnetic flux density is "Ω,E," but if you first read "Ω" as "nohm," you will know that the next unit is not an SI unit but a harmonic system unit so that you can read it as "nohm Ørsted" instead of "nohm harmonic Ørsted." Similarly, the unit of electric flux density, "Ω, E," can be read as "turn Ørsted" instead of "turn harmonic Ørsted."	
	harmonic Tesla	'harmonic Tesla'	T	○	○		○				
defining constants	the Rydberg constant	'Rydberg'	R_∞	○	○						
	the speed of light in vacuum	'light'	c or c₀	○	○					10 ⁻⁸ light is called 'atol(y), 1 atol = 1 harmon / nic = 2.509 997 km/hour	
	the quantum of action	'quantum'	h	○	○						
	the Boltzmann constant	'Boltzmann'	k_B	○	○						
non-coherent supplementary constants	total solid angle of a hypersphere	Ω _n is called 'cycle'	Ω_n	○	○				○		
		Ω _n is called 'turn'	Ω_n	○	○				○		
	logarithm of an integer	f _i is called 'bit'		○	○						
		f _i is called 'figure' (d = log12./log2) f _i is called 'nibble'	f _i (i = 1,d,4,8,...)	○	○						
	universal mol	'universal mole' with <i>substance name</i> (ex. universal mole Carbon dioxide)	mol <i>substance symbol</i> (ex. molCO ₂)								
minor prefixes	10 ⁻⁴	'sub'	s	○	○					The prefix 'harmonic(±)' is omitted if the expression includes the prefix 'sub'.	
	10 ⁻⁸	'atomic'	a							The prefix 'harmonic(±)' is omitted if the expression includes the prefix 'atomic'.	
major prefixes	10 ⁻¹	'dirac'	da							'dirac' is used only when expressing the unit of the Gravitic System with the Harmonic System.	
	10 ⁻⁴	'hyper'	h							The prefix 'harmonic(±)' is omitted if the expression includes the prefix 'hyper'.	
power prefixes	10 ⁻⁸	'cosmic'	c							The prefix 'harmonic(±)' is omitted if the expression includes the prefix 'cosmic'.	
	2nd power	'bi-'	2								
	3rd power	'tri-'	3								
	4th power	'tetra-'	4								
	5th power	'penta-'	5								
	6th power	'hexa-'	6								
	7th power	'hepta-'	7								
non-coherent Earth local unit and supplementary constants	the meridian length of the Earth	'Earth meridian' or simply 'meridian'	m_E						○		
	the rotation period of the Earth (at the beginning of year 1900.)	'Earth solur' or simply 'solar'	s_E								
	the gravitational acceleration of the Earth	'gee of Earth' or simply 'gee'	g_E								
non-coherent Earth local calendar time	units	difference of thermodynamic temperature and the base point (0 ^o H is correspondent to 118,2354 _o K)	'degree H'	°H				○			
		365.31/128. days	'year'	Y				○			
		10 ⁻³ year	'month'	M					○		
		1 Ω ₁	'day'	D	○	○			○		
		10 ⁻³ day	'unitia'	U					○		
		10 ⁻² day	'dita'	D					○		
		10 ⁻³ day	'tertia'	T					○		
		2 ⁻⁷ (1/128.) day	'nodus'	N					○		
		2 ⁻⁶ years	'hexon'	H					○		
		10 ⁻³ nodus	'ternon'	T					○		
The units out of the Universal Unit System (not part of the Universal Unit System)	100; times least valued currency unit	'mon' with <i>country name</i>	mon <i>country name</i>							100; times least valued currency unit for each country(or economic group) Its value is distinguished by attaching the country code after 'mon'. (ex. 1; mon _{us} = 1.44\$)	
	10 ⁻⁴ harmon	'league'	h					○		1 league = 5.6475 kilo meter = 3.5092 mile	
	10 ⁻³ harmon	'uninoh'	h					○		1 uninoh = 2.2696 centi meter = 0.89354 inch	
	10 ⁻² harmon	'dinoh'	h					○		1 dinoh = 1.8913 milli meter = 6.2052 mil	
	10 ⁻² lookoh	'dinol'	h					○		1 dinol = 0.91548 gram = 0.03229 ounce
